- Levelheadedness, Quickness to Learn, Team Leadership, Team Training, Technical Demos, Proofs-of-Concept, Documentation, Remote Debugging and After-sales Support, Overseeing Integrations, Managing Live Broadcasts, Systems Optimization, Cross-department Coordination.

EXPERIENCE

Freelance Translator **2018-2018**

- Translating texts on various topics (IT, History, Legal, Gaming, Science) from- and into English, Russian and Latvian languages.
- Localizing and adapting complex textual works.
- CAT tools: Trados, MemoQ.
- Strong background in neural machine translation theory, understanding of limitations, and practical application.

L1, L2 Support Engineer at Stream Labs **2018-2019**

- Handling time-sensitive high-stress live-broadcast environments.
- Remote debugging of issues related to Playout software, Monitoring software, OSes (Windows, Windows Server, Linux distros such as Debian), Server-grade Hardware.
- Maintaining calm and positive relations between Sales, Product and Support intra-company Teams.
- Maintaining goal-oriented, blameless and mutually beneficial relations between the end-user's Engineering and Management Teams, as well as proper documentation and communications with any relevant stakeholders, such as System Integrators.

Pre-sales Manager at Stream Labs **2019-2026**

- Creating Proofs-of-Concept and customer-tailored technical demos.
- System Design and Architecture between Software suites and Server-grade hardware, using diagramming tools like Visio/Miro.
- RFP/RFI/Tender Requirements Analysis, and maintaining proper communication channels between stakeholders.
- Creating and maintaining SoW/DoD/other documentation, utilization of Microsoft365 and Atlassian suites, mostly Jira for bug tracking and inter-department communication.
- Presenting the company at road shows and international exhibitions, such as IBC and NAB.
- Managing and assisting with Sales lifecycle and bookkeeping. From Presales consulting upon receiving a new lead, to aiding the Sales Manager lead price negotiations, to closing the deal, to coordinating proper after-sales support.
- In-depth knowledge of the Broadcasting market and deep technical expertise in Playout, Monitoring and similar mission-critical software.

Success stories and closed B2B deals:

- Distributed, multi-channel Playout system sold to a North American reseller. It enabled him to create 5+ 1080p professional TV channels, with CC and graphics, such as tickers, countdowns, now-next, with IPTV and OTT outputs.
- A Cloud-native Playout system for dozens of channels sold to a major Indian broadcaster. The system allowed the customer to create highly complex L-band and other animated CGs, SD/HD/UHD channels with multiple outputs each, mostly OTT in different definitions.
- Highly complex, distributed ASI/RF/Satellite Monitoring system sold to a North African organization and installed in multiple cities.
- A Software + Hardware Playout complex sold to large company in the Balkans, enabling the end-user to manage over 40 live inputs, orchestrate very complex graphical displays per channel, and mix-and-match a dozen radio inputs, and multiple RTMP/HLS/UDP-IP video inputs per Playout channel.

This CV was human-made, without any use of AI.
